MAINS PLUG REPLACEMENT

If the plug supplied is cut off it should be destroyed. There is an electric shock hazard if a cut off plug is inserted into a 13 amp socket.

No earth required. Hymo products are double insulated to ENGO335 and under no circumstances should an earth be connected to any part of the product.

Ensure the mains voltage suits your product.

Into wires in the mains lead are coloured in accordance with the following code:

BLUE

HOWN

The wires which is coloured BLUE must be connected to the Termial which is marked with the letter 'N' or coloured BLACK.

The wire which is coloured BROWN must be connected to the Termial which is marked with the letter 'L' or coloured RED.

It is important that the outer sheath is clamped correctly into the 3-pin plug.

If in doubt consult your local Service Repairer or qualified electrician before the machine is used. qualified electrician before the machine is used.

A 13 Amp fuse must be fitted to the Mains Plug.

The normal plug fuse and household fuse only protect the electrical equipment and are not a safeguar against electrocution.

Nominatin rating:
1.00mm² size cable, 10 amps 250 volts AC.
YOUR PRODUCT IS SUPPLIED WITH AN ELECTRIC
MAINS CABLE WIRED DIRECTLY INTO THE PRODUCT.
1. If the supply cord is damaged, it must be replaced by your local Husqvarna UK Ltd. Approved Service Centre or similarly qualified persons in order to avoid a hazard.
2. Flymo Extension Cables are available from your local Husqvarna UK Ltd. Approved Service Centre.
3. Do not wire an extension cable directly to your product yourself. Please contact your local Husqvarna UK Ltd. Approved Service Centre for further information on the connectors and kits available.
4. Only use extension cables specifically designed for outdoor use and which conform to one of the following specifications: Ordinary rubber (60245 IEC 53), Ordinary PVC (60227 IEC 53) or Ordinary PCP (60227 IEC 53) or Ordinary PCP (60245 IEC 57)

Etymo connectors are suitable for use with 2 core cable only. Under no circumstances should these connectors be used for earthed products.

All Flymo connectors and cables are of splashproof construction. They are not waterproof and must not be left outside permanently nor should they be submerged or immersed in water. Do not let cable lay or trail through

Assembly Instructions Α

Shaft Assembly (A)

- Locate the lower shaft (A1) into the upper shaft (A2).
- Grasp firmly and hold steady the lower shaft. Locate the upper shaft and snap together firmly.
- The unit is correctly assembled when the gap between the upper and lower shaft has been closed.

Wheel Assembly (B) & (C)

- Fix the 2 halves of the wheel together as illustrated in
- Attach the wheel to the trimmer making sure that it is
- located into the groove on the trimmer head (C1). Clip the wheel together on the other side, making sure
- it is secure. The wheel should turn freely.

- Safety Guard Assembly (D) & (E)

 1. Locate the safety guard (D1) over the cutting head (D2). Ensure the nylon line is fed through the hole in the safety guard as illustrated in fig D.
- Push into location and turn safety guard in the direction illustrated in **Fig E**, until a click is heard and the
- safety guard is securely locked in position.
 ENSURE THE SAFETY GUARD IS SECURELY IN PLACE BY ATTEMPTING TO TWIST GUARD.

How to trim and edge

WARNING

- The use of eye protection is recommended. Do not lean over the trimmer whilst trimming or edging, objects may be thrown by the cutting line. Do not allow cutting head to rest on the ground.
 Do not overload your trimmer.
 - Overloading can be avoided by making sure the motor speed does not drop unduly.

 DISCONNECT FROM THE MAINS ELECTRICITY
 SUPPLY BEFORE ATTEMPTING ANY MAINTE-
- NANCE OR ADJUSTMENT. BEFORE USE
- Make sure that both lines are fed out.
- Make sure motor is up to full speed before trimming or

How to trim

- Hold as illustrated in **Fig F**.
 To start, squeeze the safety lock-off/switch lever **(F1)**.
- Cut with nylon line at an angle using the tip. See Fig G. Swing trimmer in and out of the cutting area taking
- small cuts (H) Line is fed out automatically every time the trimmer
- head stops rotating and returns to operating speed
- Extra line can be fed out manually as described in
- 6. To stop your trimmer release the switch lever

Using the Plant & Tree Guard
The Plant and Tree Guard (J1) allows the trimming of
grass close to plants and trees without damaging them with the cutting line.

1. Flip the guard down as illustrated in Flg J1.

2. Use the trimmer around trees (J2) and near plants.

- How to edge
 1. To convert to edging mode, press button (K1) and twist head (K2). An audible "click" will confirm that the head
- Hold as illustrated in **Fig F**.
 To start, squeeze the safety lock-off/switch lever **(F1)**.
- Rest edger on wheel for extra stability and line up the edge of the lawn with the two indicators on the guard (L1). Edge in direction indicated in Fig L
- To stop your trimmer release the switch lever To return to trimming mode, press button and twist head back the opposite way. An audible "click" will confirm that the head is locked.

Double Auto Feed System

How the automatic line feed works (M)

- When initially switching on the trimmer, a small length of line is fed out.
- A 'clattering' noise will be heard when the two nylon lines hit the line cutter. **DO NOT BE ALARMED this is** quite normal. After approximately 5 seconds the line will be cut to the correct length and the noise will reduce as the motor reaches full speed
- Make sure the motor is up to full speed before trimming or edging.
- If the noise of the nvlon line being cut cannot be heard, more line will need to be fed out.
- To feed more line, it is first necessary to to allow the motor to stop completely, then re-start, allowing the motor to reach full speed.
- Repeat step 4. until you hear the lines hitting against the
- cutter. (Do not repeat this procedure more than 6 times)
 If problems are experienced with the automatic line

Manual line feed

To manually feed the nylon line (N)

feed refer to Fault Finding Chart.

- If required line can be fed out manually.
- 2. To operate, press and release manual line feed button. whilst gently pulling on one of the lines until the line reaches the line cutter
- 3. When the required amount of line is fed out, gently pull on the second line (there is no need to press the man-ual line feed button again).
- 4. If the line extends past the line cutter, too much line has been fed out.
- If too much line is fed out, remove the spool cap and click spool anti-clockwise until the line is at the desired length.

Cutting Head

P

Q

Spoo

Spoolholder

To remove spool cap 1. Press and hold in the two cap release latches. (P). Pull cap away from the spoolholder. (P)

When refitting the spool cap

- Keep all areas of the cap and spoolholder clean. Failure to do so may prevent the cap being securely lo-
- cated in the spoolholder. Replace the cap, pressing firmly DOWN towards the
- spoolholder to ensure cap is fully located. Check that the cap is correctly fitted by trying to remove it without depressing the two latches

To replace nylon line.

For your convenience it is recommended you buy spool and line complete. Nylon line only is also available. Both are available from Husqvarna UK Ltd. stockists.

To fit spool and line complete:

- Remove old spool
- Place new spool into spoolholder with cut out areas of
- the spool in line with eyelets as shown in figure Q.
 Release one line from cleat and feed line through eyelet (Q).
- Repeat for second line. Ensure spool is fully located by gently rotating it during fit-
- ment, whilst keeping the spoolholder steady

To fit nylon line only:

- Remember! Your Flymo Trimmer is designed to use only nylon line with a maximum diameter of 1.5mm. Use only genuine Flymo nylon line.

 IMPORTANT - Always wind the line onto the upper sec-
- tion of the spool first.
- Take approximately 5 metres of line. Insert 15mm of line into one of the holes in the upper section of the spool (R) and wind line in the direction of the arrows on the top of the spool. Leave approximately 100mm of line unwound and place into cleat as illustrated in figure R1. Repeat on lower section of spool.

 Care should be taken to ensure that the line is neatly
- coiled on the spool. Failure to do so will impair the efficiency of the automatic line feed.
- Then fit spool as described in To fit spool and line complete', section above.
- Always return the product to its normal operating position before switching on.

Maintenance

WARNING Disconnect from the mains electricity supply, before attempting any maintenance or adjustment. Cutting head continues to rotate after the trimmer has be switched off. Keep fingers and hands clear of the line

Caring for your Contour

After you have finished using your Flymo Contour follow the procedure below:

1. Disconnect from the mains electricity supply.

cutter on leading edge of guard.

- Never clean your trimmer with water, cleaning fluids, or solvents, just remove debris with a suitable tool, a soft
- Using a soft brush, clean around the inside of the safety guard, the cutting head (Fig S) and the motor housing air vents. (**Fig T**)
 Remove the wheel by pressing one of the buttons.
- Clean the wheel and groove on trimmer head with a soft brush (V & W).
- Attach wheel as described in **Wheel Assembly**.
 Inspect the trimmer carefully, especially the parts of the cutting head.

 If your trimmer is damaged in any way contact your
- local Husqvarna UK Ltd. approved service centre.

Never use a damaged trimmer. Cable Storage

- Your mains cable can be stored on the product as illustrated in Fig X1.
- Wind cable carefully to avoid kinking.
- Store in a cool, dry place and out of reach of children. Do not store outdoors.
